

Mobile Working

Data capture working apps for business and the public sector.

Mobile enable your processes to cut out the paper and improve productivity, efficiency and quality.

Surveys, inspections, checklists, audits and reports on smartphones or tablets.

Mobile Working Solutions

Background

Government's Project Nomad proved that mobile working could improve efficiency, lower costs and improve service quality.

Traditional mobile working solutions often require large investment in solution design and complex integration. As an alternative, Digital Nomads have an affordable app based solution that can be deployed quickly and is ideal for both business and public sector organisations.

Backed up by over 12 years' experience of mobile working, we are ideally placed to help you benefit from the mobile revolution.

Nomad Solutions

Replace your paper forms and documents and streamline your business processes with the Nomad App and custom mobile forms designed for your business.

Capture data on your Android or iOS phone or tablet and quickly and easily output formatted reports and *pro formas* by email.

A single app, customised to meet your needs, can include multiple forms to mobile enable many processes including: -

- Asset inspections
- Health & Safety audits and inspections
- Vehicle checks
- PPE checks
- HR and payroll (e.g. leave, timesheets etc.)
- Fire Safety checks
- Sales, orders and stock keeping
- Measurement logs and compliance checks (e.g. refrigeration temperatures)

Surveys, inspections, checklists and audits are fast and easy with Nomad on your phone or tablet. Stop wasting time duplicating data entry, typing and filing back in the office.

Easily capture GPS, photos, video, audio, barcodes and even signatures. Use your smartphone or tablet to cut costs, save time and replace the paper.

How Does It Work?

The Nomad App is managed via a cloud based web platform where Digital Nomads set up your organisation and users and build your mobile forms (data capture screens).

The Nomad App will be available to download from the Apple App and/or Google Play Stores. When you log into the app, mobile forms unique to your organisation will be ready for your use.

We configure your solutions, building bespoke reports to merge with your captured data and to generate *pro forma* PDF's that can be automatically emailed to yourself and/or your clients directly from location, without having to return to the office to type up a report from paper notes.

What's more, we can build integration with Google, Dropbox, OneDrive and other popular file storage services.

In addition to storage of your completed forms in PDF format, captured data can automatically populate Google spreadsheets, to pull together a centralised record, and our API can also enable the development of more powerful integrations with other systems.

Users can be given access to one or multiple mobile forms when they log in to the app. Different users in your organisation can be presented with different forms, all centrally managed by Digital Nomads on your behalf.

Digital Nomads can get your mobile apps up and running quickly, working with you to develop mobile solutions that deliver real benefits in terms of efficiency, accuracy and assurance.

Technology

Every app created on our platform is offline capable as a standard feature because we know Internet connections are not always reliable when you are out in the field.

Our intelligent technology securely caches all data on the mobile device and synchronises when connected.

You can also exit and save a mobile form part way through completion and resume at a later time.

We know that performance is also critical to a good user experience. Our application technology is 100% native compiled code, giving you the speed you expect and access to your device features e.g. GPS and camera.

Our fully hosted cloud service runs on Windows Azure cloud servers, which includes a 99.9% hardware uptime SLA from Microsoft and is one of the most secure hosting environments available.

All changes made to your forms via our platform are seamlessly deployed to your users' devices over the air, with no manual updates needed.

Optional Add-Ons

Branded App

White label our App Technology and put your own branded app into the Apple App and/or Google Play Stores.

The app carries branding, images and colour schemes of your choice from end-to-end. Your staff will then install and use your branded app (instead of the Nomad App) to get access to their mobile forms and other app content.

We publish your branded app under your organisation's name in the respective app store(s), with no mention of Nomad or Digital Nomads anywhere. Your app is updated automatically as we release new functionality and ensure compatibility with new devices and operating system versions.

If appropriate, you can even offer your clients their own branded apps in turn, with full support.

Nomad Platform Subscription

With a Nomad Platform subscription, you could develop your own forms with our drag and drop App Builder tools and gain independence in the management and use of the Nomad APP (or your own branded app) and your mobile forms.

Having access to our platform would also enable you to edit your reports and PDF's, manage your forms and integrations and add and remove users. The platform also includes push notifications – send tasks and forms to your users in real time.

Cloud based (no software to install), the platform is accessed at <https://secure.nomad.solutions>

Custom Branded Platform

Rebrand our cloud platform with your own identity and enjoy all the features of the Nomad platform to manage your own app and mobile forms.

Use a web domain name of your choice to complete the branding experience (SSL Certificate required).

Nomad Server

Host our entire web platform yourself with our Nomad Server product. All you need is an Internet accessible server running Microsoft Windows Server with a SQL Server database.

This gives you full control over all data, backups and network security and is aimed at larger public sector organisations with IT personnel and infrastructure available to run the platform.

Our Fees

How it works

We charge a flat fee for each user linked to your account.

There are no hidden costs. The number of forms in your app and the number of times a form is used has no bearing on our monthly fees.

We levy an initial set up charge to provide consultancy and development time to configure your account, design your forms and mobile enable your business processes.

The initial outlay will depend upon the complexity and number of forms and users.

Enquiries

To discuss your requirements in more detail please contact Digital Nomads on 0843 289 0299 or mail@nomad.solutions
